Sequence 91, Application US/09728445

Patent No. US20020102543A1

GENERAL INFORMATION:

APPLICANT: Friedrich, Glenn

APPLICANT: Zambrowicz, Brian

APPLICANT: Sands, Arthur T

TITLE OF INVENTION: No. US20020102543A1e1 Mutated Mammalian Cells and

TITLE OF INVENTION: Animals

FILE REFERENCE: LEX-0102-USA

CURRENT APPLICATION NUMBER: US/09/728,445

CURRENT FILING DATE: 2000-11-30

PRIOR APPLICATION NUMBER: US 60/168,358

PRIOR FILING DATE: 1999-12-01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3.3%; Score 76.8; DB 13; Length 249487; 70.2%; Pred. No. 2e-10; ive 0; Mismatches 57; Indels 5;

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Resploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BY079997 RIKEN full-length enriched, 10 days neonate heart Mus musculus cDNA clone K630022E19 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2247

The sequence contained an oligo-dT track that was present in the oligonuclecide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Noti site and the oligo-dT track served to identify it as a clone from the

polylinker; Site_I: Not I; Site_I: Bco RI; The UIR-DKO
library is a subfracted library derived from a mixture of
five individually tagged normalized rat libraries;
brain-nRBP (20%), haart-nRHP (20%), kidney-nRKP (20%),
acrea-nRAP (20%), and placenta-nRPP (20%). Each original
library was constructed from a mixture of equal amounts of
RNA from seven different developmental Lime-points:
embryonic day 1', adult day 12, adult day 75, and adult day
20 (Exception: the aorta pool does not contain embryonic
day 1' RNA and the placenta pool contains only the three
embryonic stages). Each library was normalized
individually according to the procedure described by
Bonaldo, Lennon & Soares (Genome Research Genome 6:
791-806, 1996). For construction of the five individually
tagged normalized libraries was mixed in the proportions
specified above and electroporated into competent bacteria
for production of single-stranded circular DNA
representing the pool of libraries. Single-stranded
circular DNA representing these five normalized libraries
was then used as a tracer in a subtractive hybridization
with a driver (PCR amplified inserts from a plasmid DNA
template preparation) comprising: a) a set of about 1,000
arrayed clones from each of the five normalized
libraries of brain (CTOs), heart (CSOs), kidney (CUO), aorta (CWOs), and placenta (CXOs). The resulting pool of about 2,000 arrayed
clones from each of the five normalized libraries of brain
(CTO), heart (CSO), kidney (CUO), aorta (CWOs), and
placenta (CXOs). The resulting pool of about 2,000 arrayed

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bonaldo,M.F., Lennon,G. and Soares,M.B.
Normalization and subtraction: two approaches to facilitate gene
present between the Not I site and the oligo-dT track. The library was constructed as described by Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996. Tissue provided by Jim Lin, Department of Biology,

The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand CDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized ventricle at 13 dpc library CDNA bibrary Preparation:

The sequence contained an oligo-dT track that was present in the oligouncleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized ventricle at 13 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com)
                                                                                                                                                                     1 (bases 1 to 511)

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel

of pWD42 (gi|4732114 |gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into adaptored vector DNA, and transformed into an elected to a majorially-competent B. coli Xii0-Gold (Stratagene) cells and selected for ampiciallin resistance."

Glones are derived from the mouse BAC library RPCI-23. For BAC
library availability, please contact Pieter de Jong
(pieter@dejong.med.buffalo.edu). Clones may be purchased from
BACPAC Resources (http://bacpac.med.buffalo.edu/orderingframe.htm)
or from Resea ch Genetics (info@resgen.com). BAC end page:
http://www.tigr.org/tdb/bac_ends/mouse/bac_end_intro.html
/note=Torgan: Kidney/Brain; Vector: pBACe3.6; Site_1:
BCORI; Site 2: BCORI; Female C57BL/6J mouse kidney and/or
Brain genomic DNA was isolated and partially digested
with a combination of BCORI and BCORI Methylase. Size
selected DNA was cloned into the pBACe3.6 vector at the
BCORI sites. The ligation products were transformed into
BHIOB electrocompetent cells (BRL Life Technologies).
